DESCRIPTION

Backend Software Engineer (Go, TypeScript) with 3+ years of professional experience (since May 2024). Independently developed and maintain a production Go service for IoT devices. I build full-stack applications and APIs in TypeScript and manage server infrastructure and deployments using Docker, CI/CD, and Linux.

EXPIRIENCE

Full Stack Software Developer (Go, TypeScript) | 05.2024 – Current | CodeFellow

Go:

- Independently designed and developed a service running on Teltonika routers at a client's site. It receives MQTT messages from devices on the local network, validates them, maps them to the appropriate values, and publishes them to a secured broker. The service runs in a container, supports deployment across a fleet of devices, and I maintain it in production.
- Set up a GitHub Actions pipeline that compiles the application, packages it into a Docker image, and builds and releases new versions. The resulting image is approximately 7 MB, enabling deployment on resource-constrained devices.
- Implemented certificate-based device authentication: the backend signs certificates, and the service uses them to authenticate with the broker.
- Designed an offline buffer with a 20 MB limit that discards the oldest messages when full. It stores data during internet outages and automatically forwards it once connectivity is restored.

TypeScript / JavaScript:

- Collaborated on a full-stack ERP system built with Next.js, developing both frontend and backend features.
- Built user interfaces with React and TypeScript, using React Router to implement application navigation and routing.
- Designed and developed TypeScript APIs for various systems, tailored to project requirements and integrating applications with external services.
- Integrated frontend and backend components, implementing end-to-end functionality from the user interface to the API.

Infrastructure and DevOps:

- As part of a team, I configured and maintained over 40 Linux servers running web scrapers, using Docker, Nginx, Bash scripts, and cron for automation.
- I independently developed a Python microservice for generating charts.

Full Stack Software Developer | 03.2023 - Current | Freelance

- I design and build full-stack applications using Express.js or Hono.js for the backend and React, TanStack Start, and Next.js for the frontend. I tailor the tech stack to each project's needs.
- I develop APIs that integrate applications with external services.
- I manage projects independently, from gathering requirements to deployment.

EDUCATION

Polsko-Japońska Akademia Technik Komputerowych | 09.2024 - Current

Bachelor's Degree Program in Computer Science

Technikum nr 25 w Warszawie | 2019–2024

Degree in Computer Science

TECHNICAL SKILLS

Languages

- Go
- TypeScript / JavaScript
- Python
- SQL
- PHP

Databases

- PostgreSQL
- MySQL
- MongoDB
- Redis
- MinIO

Tools and Infrastructure

- Docker
- Nginx / Caddy
- Terraform
- Serwer Linux

Frameworks / Libraries

TypeScript / JavaScript

- React.js,
- Next.js,
- Tanstack Start
- Express.js
- Hono.js

Python

- FastAPI,
- Django / DRF,
- Pandas
- Scikit-learn
- NumPy

Go

- Gin,
- chi
- paho-mqtt

ADDITIONAL SKILLS

Verbal Languages

- Polish - Native
- English - B2

Interests

- Programing
- Automotive Industry
- AI
- WOPR Lifesaving

Hobby

- Swimming
- Solving the Rubik's Cube

CLAUSE

I consent to the processing of my personal data contained in my resume for the purposes necessary to carry out the recruitment process in accordance with Article 6(1)(a) of Regulation (EU) 2016/679 of the European Parliament and of the Council (GDPR).
